

AI strategy that gets into practice. Governance that holds.

ISOVIA is a founder-led AI company in Dubai. We help enterprises choose where AI can create measurable value, design the controls needed to deploy it responsibly, and build the capability to operate it.

The challenge: Pilots are easy to announce. The hard part is deciding what to build, which data and vendors to trust, who owns the consequences, and what evidence will prove the system is working as intended.

WHAT WE DO

01 · Set the direction

Assess readiness, prioritise use cases, model value and sequence a realistic AI roadmap.

02 · Design for accountability

Define AI policy, decision ownership, risk controls and human oversight appropriate to the use case.

03 · Choose what to build

Advise on architecture, models, platforms and vendors, including build-versus-buy decisions.

04 · Make data usable

Address data quality, ownership, architecture and readiness for enterprise AI.

05 · Make adoption stick

Clarify decision rights, train teams, measure adoption and transfer capability.

Our approach

Founder-led, from assessment through implementation decisions. Aegis informs our governance approach; platform features are scoped to the engagement.

A USEFUL FIRST CONVERSATION

Bring one AI use case. In 20 minutes we can identify the business owner, the value to test, the data or technology constraint, and the governance decision that will determine whether it can scale.

Meet Nandakumar Balasubramaniyan and Archana Yadav at Stand G85. Dubai AI Festival · 26–27 October 2026 · Dubai World Trade Centre. For follow-up, reach Archana at **+971 50 991 7369**.
