

AI strategy that reaches the business. Governance that holds.

ISOVIA is a founder-led AI consulting firm in Dubai. We help enterprises decide where AI deserves investment, design accountable deployment, and build the capability to operate it.

THE BUSINESS CONTEXT

A successful pilot is not an operating model. The hard choices concern value, data, technology, human judgement and who remains accountable when AI becomes part of everyday work.

FIVE CONNECTED CONSULTING SERVICES

- | | |
|--|---|
| 01 AI Strategy & Roadmapping | Prioritise use cases, test the value case and sequence investment against readiness, dependencies and accountable ownership. |
| 02 AI Governance Architecture | Translate responsible-AI principles into decision rights, risk controls, human oversight and evidence suited to the use case. |
| 03 Technology & Vendor Advisory | Compare models, platforms and suppliers against architecture fit, economics, data control and the ability to change course. |
| 04 Data Strategy & Readiness | Assess data fitness, provenance and ownership, then prioritise the foundations a specific AI use case needs. |
| 05 Operating Model & Change | Redesign work, clarify roles and build enablement, adoption measures and a handover the organisation can sustain. |

Founder involvement. Connected strategy and governance. Client capability, not dependency.

START WITH ONE DECISION

Bring one AI use case. We will explore the decision, its constraints and whether a focused consulting engagement is the right next move.

OUR APPROACH

01 / Understand

Start with your business objective, decision owner and the evidence needed to establish value.

02 / Design

Connect strategy, architecture, data, governance and operating change in one practical engagement.

03 / Enable

Agree deliverables and responsibilities, support the next decisions and leave capability with your team.

Implementation and ongoing support are agreed separately; consulting scope and commercial terms are explicit.
